Meet the RideSwift Rentals

Fictitious company

TDX Hackathon

Started in 2021 with just 10 Cars

RideSwift Rentals is a fastest growing company started in 2021 with a small set of vehicle availability but a lot of courage and big dreams towards business growth and customer satisfaction.

By 2024 their fleet grew to 500+ vehicles

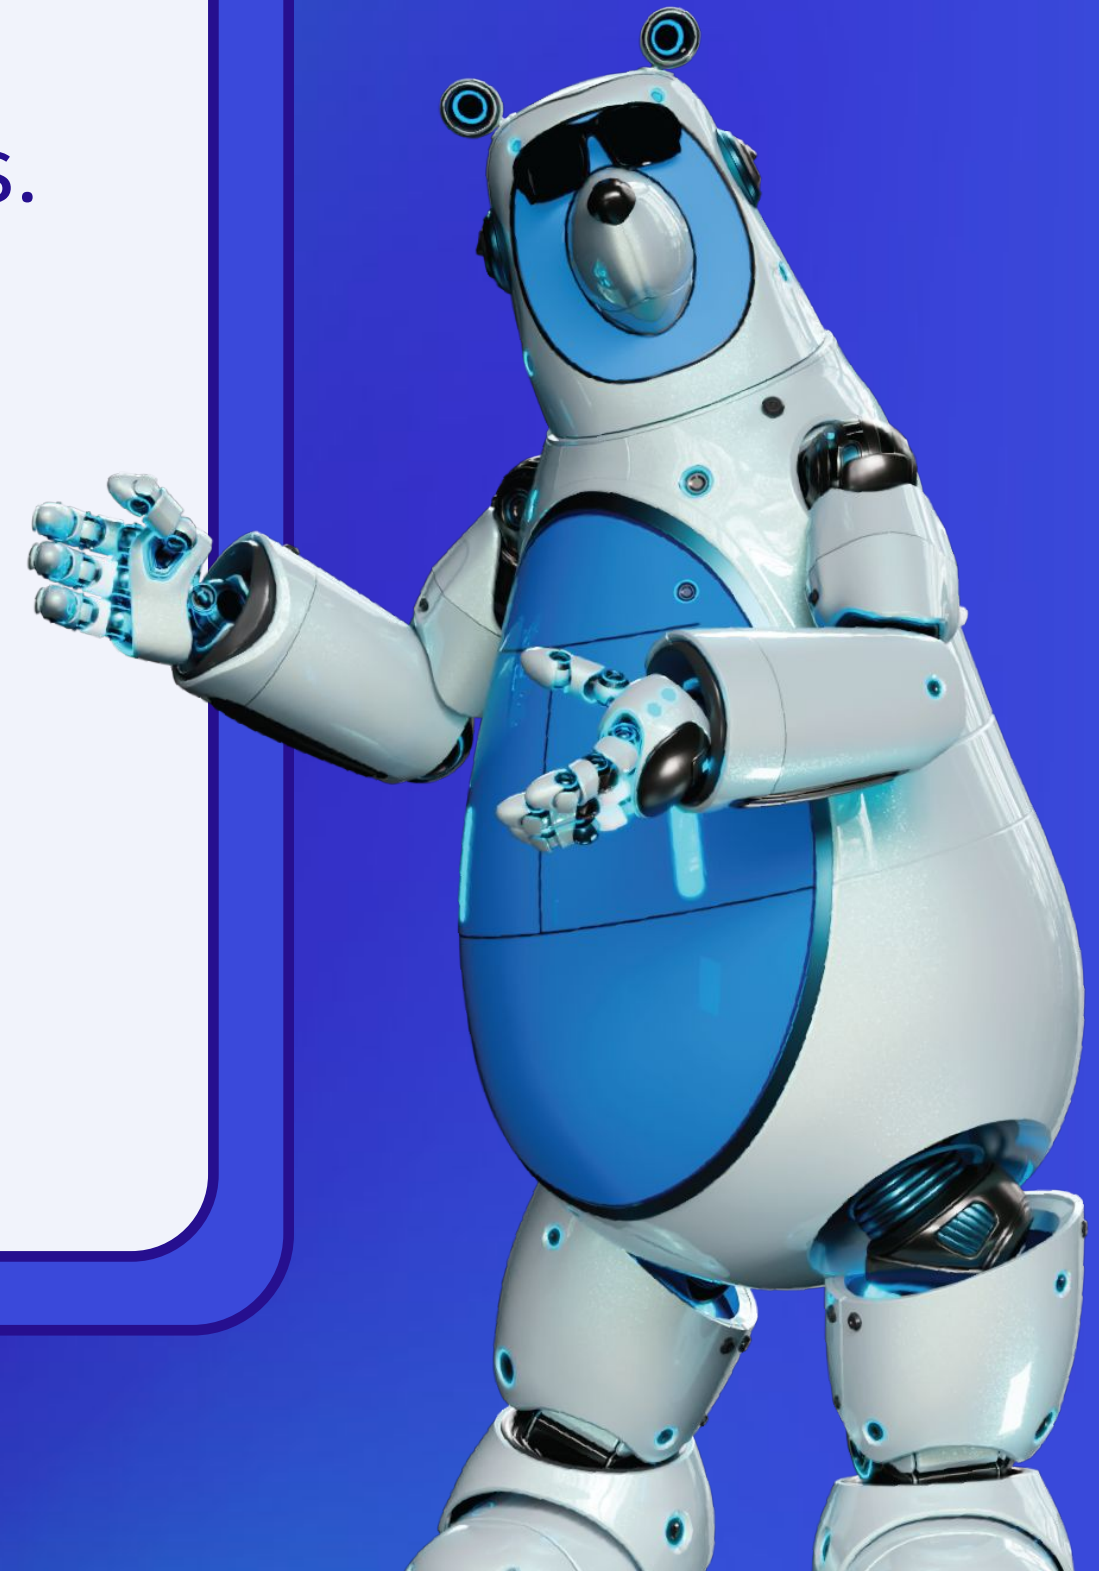

In just three years their fleet grew from 10 cars to 500+ vehicles includes some top brands vehicles with 2 wheeler and 4 wheeler segments.

Customer Experience didn't grew as fast

The business was growing very quickly but somehow their customer experience was not growing as expected. By 2024 they had NPS 48.

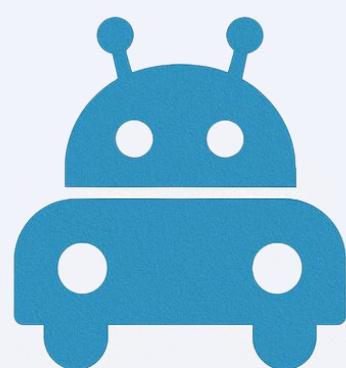

The Problem (Before Agentforce)

- ✗ Manual inventory check and booking.
- ✗ Overbooked vehicles, missed opportunities.
- ✗ High staff workload during peak season.
- ✗ No real personalization.
- ✗ Slow support and claim validation.
- ✗ Slow response to queries and complaints.

Salesforce Agentforce
Smart Rental Agent

Customer Journey

TDX Hackathon

01

Customer initiates the Chat with the Agent from the Experience Cloud website.

02

Agent understands the chat and gets the real-time data using Data Cloud.

03

Customer can view, filter and book vehicle and will receive confirmation details over the email.

04

Pickup location manager receives booking details on Slack and can confirm, complete or cancel the booking as required

05

RESULT – Faster process and Happy Customers.

Behind The Scenes

TDX Hackathon

Customer Vehicle Booking

Customer logs into the portal and validates using their email address. Upon OTP validation and login, they can request New Bookings, Modify and Cancel the existing Bookings

Realtime Data with Data Cloud

Realtime Vehicle Inventory is retrieved from external database using Data Cloud. Vehicles are Segmented by type, city and availability. Unified Profiles are created for Personalization Suggestions

Agentforce in Action

Agentforce implementation is there to understand customer's request and fetch data from the Data Model Object. Agent will be able to filter the records and help customer to book, modify or cancel booking.

Slack - Agent on Your Fingertips

Slack is there to help store managers on the pickup location. The agent is accessible on the Slack where store managers will be able to see all the booking and manage existing bookings.

RAG (Retrieval-Augmented Generation)

salesforce

Insurance PDF

For each vehicle we are having a insurance document PDF file which is uploaded in the environment.

Slack + Agentforce

Using Slack store managers will be able to check vehicle insurance details. They can simply ask the agent if XYZ is covered as part of the insurance policy or when it is up for renewal.

Use of RAG

RAG connects the document base (insurance PDFs) to the agent via Salesforce Data Cloud or Files.

It uses contextual question answering based on embedded document chunks.

Impact After Agentforce Implementation

TDX Hackathon

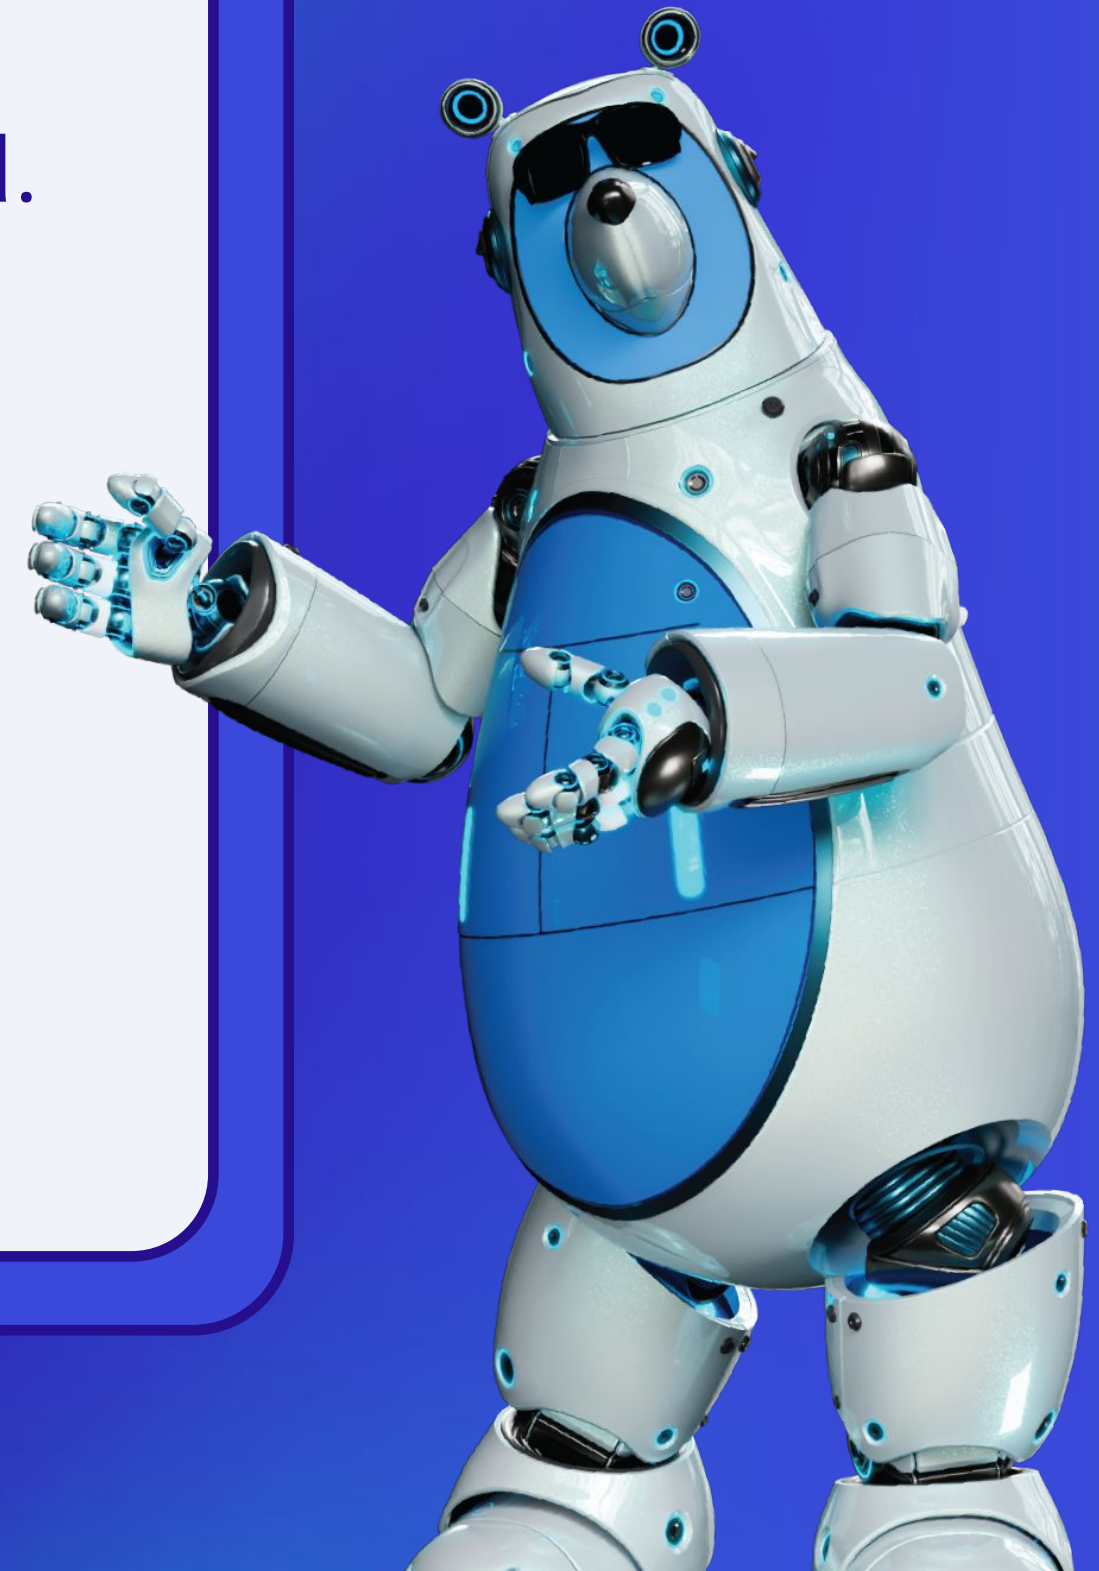

In just 6 months after rollout...

Business Benefits for RideSwift Rentals

Metric	Before	After	%Improvement
